

## Energy Policy

The Telecommunications and Digital Government Regulatory Authority (TDRA) of the United Arab Emirates (UAE), established to regulate the telecommunications sector in the country, is committed to an effective Energy Management System, for embedding sustainability as one of TDRA's core corporate values & consistently integrate it into TDRA's business model.

TDRA has adopted an Energy Management System (EnMS) comprising of the Energy Policy, Procedures and Processes to effectively improve the Operational Energy performance of its facilities. TDRA is committed to,

- Identify all issues pertaining to Energy Management System such as, reducing energy consumption, reducing energy expenses, increasing energy performance and reducing CO2 emissions, based on which objectives and energy targets will be prepared.
- Ensure the availability of information and necessary resources to achieve objectives and energy targets.
- Satisfy applicable legal requirements and other requirements related to energy efficiency, energy end use and energy consumption.
- Continually improve Energy Management System and Energy performance.
- Support the procurement of energy efficient products and services that impact energy performance.
- Support design activities that consider energy performance improvement.
- Measure, monitor and review Energy performance.

TDRA shall review the Energy Policy annually and update whenever deemed necessary.
